NEW QUESTION: 1Which of the following steps could be taken to improve the performance of this virtual machine?**Exhibit:****A.** Install VMware Tools**B.** increase the CPU reservation on the virtual machine**C.** Traffic shape this virtual machine**D.** Increase the memory limit of the virtual machine**Answer: A**

NEW QUESTION: 2In regards to secure coding practices, why is input validation important?**A.** It provides an application configuration baseline.**B.** It mitigates buffer overflow attacks.**C.** It makes the code more readable.**D.** It meets gray box testing standards.**Answer: B****Explanation:** Buffer overflow is an exploit at programming error, bugs and flaws. It occurs when an application is fed more input data than it is programmed to handle. This may cause the application to terminate or to write data beyond the end of the allocated space in memory. The termination of the application may cause the system to send the data with temporary access to privileged levels in the system, while overwriting can cause important data to be lost. Proper error and exception handling and input validation will help prevent Buffer overflow exploits.

NEW QUESTION: 3A human resource specialist creates a checklist template with Category Offboarding and Action Termination. An employee retires from the organization and hence his work relationship is terminated with the legal employer. However, there is no Offboarding checklist allocated to the retired employee in the Manage Allocated Checklist region. What is the cause for this?**A.** The Allocate Checklist seeded process must be run to automatically allocate the checklist to the person.**B.** Action Reasons were not defined in the checklist.**C.** The Action associated with the checklist does not match the Action selected during the termination process.**D.** Action Type was not defined for the checklist.**Answer: A**
