NEW QUESTION: 1

不幸な状況があなたの注意を引いた。機密データをオンプレミスで実行するビジネスクリティカルなアプリケーションは、24時間でストレージディスク領域を使い果たします。このビジネスクリティカルなアプリケーションは、他のシステムとの統合に必要な非常に大きなルートセットに依存しています。

このアプリケーションをAWSに迅速に移行するために、迅速かつ十分な情報に基づいた決定を下します。新しいVPCを迅速に起動し、その中に同等のインフラストラクチャを構築して、アプリケーションのホームを変更できます。アプリケーションデータのレプリケーションを完了し、アプリケーションが次の24時間を超えて動作し続けるようにするには、最適な実装を選択してください。**A.** 新しいVPC内-ソフトウェアベースの仮想ルーター（たとえば、Cisco CSR）を展開します。デュアルENI（外部および内部）で構成し、EIPを作成して外部ENIに接続し、IPsec

VPNトンネルを構成およびセットアップし、ジャンボフレームが有効になっていることを確認します。 **B.** 新しいVPC内-データ複製用に最大10Gbpsのポート速度でDirect Connect接続を確立します。 802.1Q VLANを確立し、仮想プライベートゲートウェイとプライベート仮想インターフェイスを構成し、ジャンボフレームが有効になっていることを確認します。 **C.** 新しいVPC内-Virtual Private Gateway、Customer Gatewayをデプロイし、BGPダイナミックルーティングを使用して新しいIPsec VPN接続を確立します **D.** 新しいVPC内-Virtual Private Gateway、Customer Gatewayをデプロイし、静的ルーティングを使用して新しいIPsec VPN接続を確立し、ジャンボフレームが有効になっていることを確認します。 **Answer: C**
Explanation: Answer A - Let's start by stating that all possible options are actually workable solutions. The key criteria of the question is to complete the data migration aspects as *quickly* as possible. With this in mind we can immediately rule out Answer A - due to the time it takes to provision and activate a fully functional Direct Connect connection, 72+ hrs. Answer C is the same as Answer D but lacks BGP - therefore we would need to setup the routes manually - more time and effort. Additionally Answer D uses Jumbo Frames - but AWS does not support Jumbo frames over the Virtual Private Gateway - therefore Answer D's use of Jumbo Frames is negated. Overall Answer B is considered the quickest option. Reference: <http://docs.aws.amazon.com/AmazonVPC/latest/NetworkAdminGuide/GenericConfig.html>

NEW QUESTION: 2 Which information is exchanged in the FLOGI sequence between a FlexFabric module and a SAN switch? **A.** port ID **B.** FCID **C.** WWND **D.** MAC **Answer: B**

NEW QUESTION: 3 Which of the following description of the single station commissioning is wrong? **A.** In case of power failure, the contact board can be used without anti-static wrist or anti-static gloves. **B.** Single station hardware check is complete, make sure all power switches are in the off position **C.** If the input voltage of the equipment is not within the required range, suggestions for rectification should be proposed. **D.** It is strictly forbidden to plug and unplug the power plug and PIU board. **Answer: A**

NEW QUESTION: 4 Which statements are true regarding deployment of lightweight access points? (Choose four) **A.** Lightweight access points support 802.3af and may connect directly to the WLAN controller or to an Ethernet switch. **B.** Lightweight access points may use DNS to locate their assigned WLAN controller. **C.** Lightweight access points may connect to the WLAN controller with either a Layer-2 or a Layer3 protocol. **D.** Lightweight access points cannot be deployed over the Internet due to Network Address Translation. **E.** Lightweight access points may be controlled over either Layer-2 or Layer-3. **F.** Lightweight access points may be configured for 802.11a or 802.11g, but not both simultaneously. **Answer: A,B,C,E**
Explanation: All lightweight APs support 802.3af power over Ethernet. Most, but not all, lightweight access points support both a layer 2 and a layer 3 protocol for establishing connectivity to their assigned WLAN switch/controller. Layer 3 protocols might include LWAPP, GRE, and others similar protocols. When distributed lightweight access points power up, they will receive an IP address from the local LAN segment, including DNS parameters. The DNS name of their assigned controller will be pre-configured in the lightweight AP. After a DNS lookup, the lightweight AP will have the correct IP address of its controller, which will allow the AP to establish a layer3 tunnel terminating at its controller.
