NEW QUESTION: 1A. Option CB. Option AC. Option DD. Option B Answer: A

NEW QUESTION: 2 Which two actions can you take to allow the greatest number of pertinent packets to be stored in the temporary buffer of Cisco IOS Embedded Packet Capture? (Choose two.)
A. Store the capture simultaneously onto an external memory card as the capture occurs.
B. Specify the sampling interval.
C. Specify a reflexive ACL.
D. Specify the packet size.
E. Specify the minimum packet capture rate.
F. Specify the capture buffer type.
Answer: B, F
Explanation: Embedded Packet Capture (EPC) provides an embedded systems management facility that helps in tracing and troubleshooting packets. This feature allows network administrators to capture data packets flowing through, to, and from a Cisco device. The network administrator may define the capture buffer size and type (circular, or linear) and the maximum number of bytes of each packet to capture. The packet capture rate can be throttled using further administrative controls. For example, options allow for filtering the packets to be captured using an Access Control List and, optionally, further defined by specifying a maximum packet capture rate or by specifying a sampling interval.
