NEW QUESTION: 1A. Option AB. Option BC. Option CAnswer: CExplanation:ExplanationOption A is an invalid option since Lifecycle policies are normally used for expiration of objects or archival of objects.Option B is partially correct where you store the data in DynamoDB, but then the number of GET requests would still be high if the entire DynamoDB table had to be traversed and each object compared and updated in S3.Option D is invalid because uploading all files to Clastic Cache is not an ideal solution.The best option is to have a notification which can then trigger an update to the application to update the DynamoDB table accordingly.For more information on SNS triggers and DynamoDB please refer to the below link:
