NEW QUESTION: 3 Which command allows Security Policy name and install date verification on a Security Gateway? **A. fw show policy B. fw ver -p C. fw stat -l D. fw ctl pstat -policy**
Answer: C

NEW QUESTION: 4 **A. Option A B. Option D C. Option C D. Option B**
Answer: D
Explanation:
Explanation With web identity federation, you don't need to create custom sign-in code or manage your own user identities. Instead, users of your app can sign in using a well-known identity provider (IdP) -such as Login with Amazon, Facebook, Google, or any other OpenID Connect (OIDC)-compatible IdP, receive an authentication token, and then exchange that token for temporary security credentials in AWS that map to an IAM role with permissions to use the resources in your AWS account. Using an IdP helps you keep your AWS account secure, because you don't have to embed and distribute long-term security credentials with your application. For more information on Web Identity federation please refer to the below link: * <http://docs>
