NEW QUESTION: 1 **Answer:** Explanation: Here is the solution below. Explanation: Since we know that the network was running perfectly before replacing AP2 we should start by looking at this new device that was used to replace the old one. Here we see that the other AP's have hard coded the speed and duplex settings to 100/full, while AP2 is set to auto/auto. Also, the other AP's have been configured to use 802.11G, while AP2 is using 802.11B. Finally the channel that AP2 is using overlaps with AP1 which can cause problems. Channels 1, 6, and 11 are spaced far enough apart that they don't overlap. On a non-MIMO setup (i.e. 802.11 a, b, or g) you should always try to use channel 1, 6, or 11. Since AP1 is using 1, and AP3 is using 11, AP2 should be using 6. This cmdlet is available in on-premises Exchange Server 2016 and in the cloud-based service. It applies to Exchange Online and Exchange Server 2016. Retention tags are used to apply message retention settings to folders and items in a mailbox. Example: This example creates the retention policy tag Finance-DeletedItems for the Deleted Items default folder. When applied to a mailbox as a part of a retention policy, the tag permanently deletes items of all types in the Deleted Items folder in 60 days.
