NEW QUESTION: 4 Sie haben einen SQL Server 2014-Cluster mit zwei Knoten, für den im synchronen Modus eine Always On-Verfügbarkeitsgruppe konfiguriert ist. Sie planen, eine Berichterstellungslösung mithilfe eines dritten Knotens im Cluster bereitzustellen.Sie müssen den dritten Knoten hinzufügen. Die Lösung muss verhindern, dass die Leistung von Datenbankschreibvorgängen beeinträchtigt wird. Sie installieren einen anderen Server, auf dem SQL Server installiert ist.Welche drei zusätzlichen Aktionen sollten Sie nacheinander

ausführen? Verschieben Sie zum Beantworten die entsprechenden Aktionen aus der Liste der Aktionen in den Antwortbereich und ordnen Sie sie in der richtigen Reihenfolge an.**Answer:** Explanation:ExplanationStep 1: Add a new availability replica in asynchronous mode. Asynchronous-commit mode minimizes transaction latency on the secondary databases but allows them to lag behind the primary databases, making some data loss possible.Incorrect: Add a new availability replica in synchronous mode.Synchronous-commit mode ensures that once a given secondary database is synchronized with the primary database, committed transactions are fully protected. This protection comes at the cost of increased transaction latency.Step 2: Set Readable Secondary to Read-intent only.For the secondary role, select a new value from the Readable secondary drop list, as follows: Read-intent only Only read-only connections are allowed to secondary databases of this replica. The secondary database(s) are all available for read access.Step 3: Configure read-only routing.Note: Read-only routing refers to the ability of SQL Server to route qualifying read-only connection requests to an available Always On readable secondary replica (that is, a replica that is configured to allow read-only workloads when running under the secondary role). To support read-only routing, the availability group must possess an availability group listener. Read-only clients must direct their connection requests to this listener, and the client's connection strings must specify the application intent as "read-only." That is, they must be read-intent connection requests. References:
