You may become an important figure from a small staff, and you may get an incredible salary, you may gain much more respect from others, Our C1000-184 exam questions boost 3 versions and varied functions.

C1000-184 exam torrent obtains various versions, practical contents which follow closely with real examination.

NEW QUESTION: 1 Because Splunk indexing is read/write intensive, it is important to select the appropriate disk storage solution for each deployment. Which of the following statements is accurate about disk storage?
A. High performance SAN should never be used.
B. Enable NFS for storing hot and warm buckets.
C. The recommended RAID setup is RAID 10 (1 + 0).
D. Virtualized environments are usually preferred over bare metal for Splunk indexers.
Answer: C

NEW QUESTION: 2 **A.** process **B.** global **C.** enabled **D.** Interface
Answer: D
Explanation: Explanation
Use the ip ospf authentication-key interface command to specify this password. If you enable MD5 authentication with the message-digest keyword, you must configure a password with the ip ospf message-digest-key interface command.
interface GigabitEthernet0/1 ip address 192.168.10.1 255.255.255.0 ip ospf authentication message-digest ip ospf message-digest-key 1 md5 CCNA
Source: Cisco Official Certification Guide, Implement Routing Update Authentication on OSPF, p.348
The OSPFv2 Cryptographic Authentication feature allows you to configure a key chain on the OSPF interface to authenticate OSPFv2 packets by using HMAC-SHA algorithms. You can use an existing key chain that is being used by another protocol, or you can create a key chain specifically for OSPFv2. If OSPFv2 is configured to use a key chain, all MD5 keys that were previously configured using the ip ospf message-digest-key command are ignored.
Device> enable
Device# configure terminal
Device(config)# interface GigabitEthernet0/0/0
Device(config-if)# ip ospf authentication key-chain sample1
Device(config-if)# end
Source: http://www.cisco.com/c/en/us/td/docs/ios-xml/ios/iproute_ospf/configuration/xr-3s/iro-xe-3s-book/iro-ospfv2-crypto-authen-xe.html
In both cases OSPF and OSPFv1 the ip ospf authentication is inserted at interface level

NEW QUESTION: 3 Which of the following is an important step in the initial stages of deploying a host-based firewall?
A. Selecting identification versus authentication
B. Choosing an encryption algorithm
C. Determining the list of exceptions
D. Setting time of day restrictions
Answer: C
Explanation: A host-based firewall is installed on a client system and is used to

protect the client system from the activities of the user as well as from communication from the network or Internet. These firewalls manage network traffic using filters to block certain ports and protocols while allowing others to pass through the system. Incorrect Answers: A. A host-based firewall is used to filter network traffic; it does not perform identification or authentication. C. A host-based firewall is used to filter network traffic; it does not provide encryption functions. D. A host-based firewall is used to filter and restrict network traffic based on ports and protocols, not on time of day.
