NEW QUESTION: 1Your network consists of a single Active Directory domain. The functional level of the domain is Windows Server 2008 R2. All servers run Windows Server 2008 R2. A corporate security policy requires complex passwords for user accounts that have administrator privileges. You need to design a strategy that meets the following requirements: Ensures that administrators use complex passwords Minimizes the number of servers required to support the solution What should you include in your design?**A.** Implement Active Directory Rights Management Services (AD RMS).**B.** Create a new Password Settings Object (PSO) for administrator accounts.**C.** Create a new child domain in the forest. Move all nonadministrator accounts to the new domain. Configure a complex password policy in the root domain.**D.** Implement Network Access Protection (NAP).**Answer: B**
Explanation: Explanation/Reference: AD DS FINE-GRAINED PASSWORD POLICY You can use fine-grained password policies to specify multiple password policies within a single domain. You can use fine-grained password policies to apply different restrictions for password and account lockout policies to different GROUPS/USERS (instead of organizational unit) in a domain. <http://technet.microsoft.com/en-us/library/cc754461.aspx>

NEW QUESTION: 2FILL BLANK Which parameter is missing in the command `ip link set ____ dev eth0` to activate the previously inactive network interface `eth0`? (Specify the parameter only without any command, path or additional options.)**Answer: Explanation: up**

NEW QUESTION: 3Which statement about Cisco FabricPath is true?**A.** The Cisco FabricPath domain appears as a single STP bridge, where each edge port uses the same MAC address.**B.** It

is a simplified extension of Layer 3 networks across a single data center. **C.** It optimizes STP throughout the Layer 2 network. **D.** It is the best solution for interconnecting multiple data centers. **Answer: A**
Explanation: To have a loop-free topology for the CE/FabricPath hybrid network, the FabricPath network automatically displays as a single bridge to all connected CE devices. The STP domains do not cross into the FabricPath network. If multiple STP domains are defined, BPDUs and topology change notifications (TCNs) are localized to the domain. If a connected STP domain is multihomed to the FabricPath domain, a TCN must be able to reach to all devices in the STP domain through the FabricPath domain. As a result, the TCN is sent to the FabricPath domain through the IS-IS protocol data unit (PDU) by default. Reference: http://www.cisco.com/en/US/docs/switches/datacenter/nexus5000/sw/mkt_ops_guides/513_n1_1/n5k_ops_fabricpath.html
