NEW QUESTION: 1 Refer to the exhibit. All switches have default bridge priorities, and originate BPDUs with MAC addresses as indicated. The numbers shown are STP link metrics. Which two ports are in blocking state after STP converges? (Choose two.)
A. the port on switch SWD that connects to switch SWEB
B. the port on switch SWF that connects to switch SWGC
C. the port on switch SWB that connects to switch SWDD
D. the port on switch SWD that connects to switch SWC

Answer: C, D
Explanation: This is a scenario that wants you to demonstrate understanding of the Root switch and Root port election process. So, it's best to start with where the root switch will be and work down from there. It's setup nicely because the lowest MAC address switch starts at the top and then the lower priority/higher mac addresses move down the architecture. SWA wins the root election and of course all ports in SWA are forwarding. SWB introduces the possibility for a switching loop so it's important to understand which ports will be put into the blocking state. Since SWD is a higher MAC address it will end up with a blocked port connected to SWB to prevent a loop: and this is one of the correct answers. To prevent the possibility of another potential switching loop, SWD again ends up with the higher MAC address so blocking the link between D and C prevents a B/C/D switching loop.

NEW QUESTION: 2 Who is responsible for initiating corrective measures and capabilities used when there are security violations?
A. Management
B. Information systems auditor
C. Security administrator
D. Data owners
Answer: A
Explanation/Reference: Explanation: Management is responsible for initiating corrective measures and capabilities used when there are security violations. Incorrect Answers: A: The Information systems auditor ensures that the correct controls are in place and are being maintained securely. The information systems auditor is not responsible for initiating corrective measures and capabilities used when there are security violations. B: The security administrator is responsible for implementing and maintaining specific security network devices and software in the enterprise. These controls commonly include firewalls, IDS, IPS, antimalware, security proxies, data loss prevention, etc. The security administrator is not responsible for initiating corrective measures and capabilities used when there are security violations. D: The data owner decides upon the classification of the data she is responsible for. The data owner is also responsible for ensuring that the necessary security controls are in place, defining security requirements per classification and

backup requirements, approving any disclosure activities, ensuring that proper access rights are being used, and defining user access criteria. The data owner is not responsible for initiating corrective measures and capabilities used when there are security violations.
