Explanation:Explanation/Reference:
Explanation:Unified CCX CTI ports are notified of caller-entered digits (DTMF input) via JTAPI messages from Unified CM. Unified CCX does not support any mechanism to detect in-band DTMF digits where DTMF digits are sent with voice packets. In deployments with voice gateways or SIP phones that only support in-band DTMF or are configured to use in-band DTMF, an MTP resource must be invoked by Unified CM to convert the in-band DTMF signaling so that Unified CM can notify Unified CCX of the caller-entered digits. Be sure to enable out-of-band DTMF signaling when configuring voice gateways in order to avoid using the previous MTP resources.References:

どのUnityVSAユーザーインターフェースで上級ユーザーが日常業務を自動化するためのスクリプトを作成することができますか？

A. Unisphere Central
B. SPコンソール
C. UEMCLID
D. Unisphere GUI

Answer: C
Explanation: Explanation Unisphere Command Line Interface (UEMCLI) is an interface that allows a user to perform tasks on the storage system by typing commands instead of using the graphical user interface. Note: Representational State Transfer (REST) is a management API that allows clients to interact with UnityVSA using standard HTTP mechanisms and semantics. Operations that can be performed in Unisphere or UEMCLI can also be performed using REST API. Application developers can access REST API with any programming or scripting language capable of making HTTP requests, without requiring a separate client.
