If you study C_S4CPB_2408 exam once you will pass your exam with high grades in the first attempt.

NEW QUESTION: 1 Which of the following statements about the security policies for the Eudemon are true? (Choose two.)
A. By default, a user in the Local zone can access other zones.
B. By default, a user in the Trust zone can access the DMZ.
C. By default, a user in a zone of the firewall cannot access any other zone of the firewall.
D. By default, a user in the Untrust zone cannot access the Trust zone.
Answer: C,D

NEW QUESTION: 2 Which of the following PBX feature provides the possibility to break into a busy line to inform another user of an important message?
A. Override
B. Access Codes
C. Account Codes
D. Tenanting
Answer: A
Explanation: Explanation/Reference: Override feature of PBS provides for the possibility to break into a busy line to inform another user an important message. For CISA exam you should know below mentioned PBS features and Risks
System Features Description Risk
Automatic Call distribution Allows a PBX to be configured so that incoming calls are distributed to the next available agent or placed on-hold until one become available
Tapping and control of traffic Call forwarding Allow specifying an alternate number to which calls will be forwarded based on certain condition
User tracking Account codes Used to: Track calls made by certain people or for certain projects for appropriate billing
Dial-In system access (user dials from outside and gain access to normal feature of the PBX)
Changing the user class of service so a user can access a different set of features (i.e. the override feature)
Fraud, user tracking, non authorized features
Access Codes Key for access to specific feature from the part of users with simple instruments, i.e. traditional analog phones.
Non-authorized features
Silent Monitoring Silently monitors other calls
Eavesdropping Conferencing Allows for conversation among several users
Eavesdropping, by adding unwanted/unknown parties to a conference
override (intrude) Provides for the possibility to break into a busy line to inform another user an important message
Eavesdropping Auto-answer Allows an instrument to automatically go when called usually gives an auditor or visible warning which can easily turned off
Gaining information not normally available, for various purpose
Tenanting Limits system user access to only those users who belong to the same tenant group - useful when one company leases out part of its building to other companies and tenants share an attendant, trunk lines, etc
Illegal usage, fraud, eavesdropping
Voice mail Stores messages centrally and -

by using a password - allows for retrieval from inside or outside lines. Disclosure or destruction of all messages of a user when that user's password is known or discovered by an intruder, disabling of the voice mail system and even the entire switch by lengthy messages or embedded codes, illegal access to external lines. Privacy release Supports shared extensions among several devices, ensuring that only one device at a time can use an extension. Privacy release disables the security by allowing devices to connect to an extension already in use. Eavesdropping No busy extension Allows calls to an in-use extension to be added to a conference when that extension is on conference and already off-hook Eavesdropping a conference in progress Diagnostics Allows for bypassing normal call restriction procedures. This kind of diagnostic is sometimes available from any connected device. It is a separate feature, in addition to the normal maintenance terminal or attendant diagnostics Fraud and illegal usage Camp-on or call waiting When activated, sends a visual audible warning to an off-hook instrument that is receiving another call. Another option of this feature is to conference with the camped-on or call waiting Making the called individual a party to a conference without knowing it. Dedicated connections Connections made through the PBX without using the normal dialing sequences. It can be used to create hot-lines between devices i.e. one rings when the other goes off-hook. It is also used for data connections between devices and the central processing facility Eavesdropping on a line The following were incorrect answers: Account Codes - that are used to: Track calls made by certain people or for certain projects for appropriate billing Dial-In system access (user dials from outside and gain access to normal feature of the PBX) Changing the user class of service so a user can access a different set of features (i.e. the override feature) Access Codes - Key for access to specific feature from the part of users with simple instruments, i.e. traditional analog phones. Tenanting - Limits system user access to only those users who belong to the same tenant group useful when one company leases out part of its building to other companies and tenants share an attendant, trunk lines, etc The following reference(s) were/was used to create this question: CISA review manual 2014 Page number 358

NEW QUESTION: 3 When does an AWS Data Pipeline terminate the AWS Data Pipeline-managed compute resources? **A.** When the final activity that uses the resources is running **B.** AWS Data Pipeline terminates AWS Data Pipeline-managed compute resources every 12 hours. **C.** AWS Data Pipeline terminates AWS Data Pipeline-managed compute resources every 2 hours. **D.** When the final activity that uses the resources has completed successfully or failed **Answer: D**
Explanation: Compute resources will be provisioned by AWS Data Pipeline when the first activity for a scheduled time that uses those resources is ready to run, and those instances will be terminated when the final activity that uses the resources has completed successfully or failed. Reference: <https://aws.amazon.com/datapipeline/faqs/>

NEW QUESTION: 4 Three boys with autism, ages 7-10 years old, served as participants in a study. During baseline, staff used response blocking when five instances of aggression or head-banging occurred within 10 seconds, until attempts ceased for 1 minute. During baseline and treatment, each occurrence of aggression and head-banging was recorded daily and converted to the number of responses per hour. Treatment comprised a differential reinforcement of incompatible behavior (DRI) schedule coupled with response blocking after every head-banging or aggression. The staff initially applied the treatment to head-banging, while continuing to take a baseline on aggression. After noting treatment effects on head-banging, the staff then applied the treatment to aggression. In this scenario, how was direct replication shown? **A.** A baseline condition was implemented. **B.** The intervention was implemented in a staggered fashion across target behaviors after the initial baseline. **C.** A changing criterion design was used wherein the criterion for reinforcement was gradually changed over time. **D.** Baseline and intervention conditions were included. **Answer: B**
