一方または両方のVPCにインターネットゲートウェイが接続されていません**C.**

ピアリング接続が適切にタグ付けされていません**D.** ルートテーブルは更新されていません**Answer:**

D

NEW QUESTION: 2What are the various components that make up a time series data?**A.** trend, noise, kurtosis**B.** trend, seasonality, causation**C.** trend, seasonality, noise**D.** trend, noise, covariance**Answer: C**

NEW QUESTION: 3A. Option AB. Option BC. Option CD. Option DE. Option E
Answer: A,C
Explanation: Advantages of HIPS: The success or failure of an attack can be readily determined. A network IPS sends an alarm upon the presence of intrusive activity but cannot always ascertain the success or failure of such an attack. HIPS does not have to worry about fragmentation attacks or variable Time to Live (TTL) attacks because the host stack takes care of these issues. If the network traffic stream is encrypted, HIPS has access to the traffic in unencrypted form. Limitations of HIPS: There are two major drawbacks to HIPS: + HIPS does not provide a complete network picture: Because HIPS examines information only at the local host level, HIPS has difficulty constructing an accurate network picture or coordinating the events happening across the entire network. + HIPS has a requirement to support multiple operating systems: HIPS needs to run on every system in the network. This requires verifying support for all the different operating systems used in your network. Source: <http://www.ciscopress.com/articles/article.asp?p=1336425&seqNum=3>
