NEW QUESTION: 1In which profile should you configure the DNS Security feature?**A.** Zone Protection Profile**B.** Antivirus Profile**C.** URL Filtering Profile**D.** Anti-Spyware Profile**Answer: D**

NEW QUESTION: 2**A.** Option A**B.** Option F**C.** Option D**D.** Option C**E.** Option E**F.** Option B
Answer: A,C,D**Explanation:**Public FoldersPublic folders can also be used as an archiving method for distribution groups. When you mail-enable a public folder and add it as a member of the distribution group, email sent to the group is automatically added to the public folder for later reference. Public folders are designed for shared access and provide an easy and effective way to collect, organize, and share information with other people in your workgroup or organization. Public folders help organize content in a deep hierarchy that's easy to browse. Users will see the full hierarchy in Outlook, which makes it easy for them to browse for the content they're interested in. Public folder architectureIn Exchange 2013, public folders were re-engineered using mailbox infrastructure to take advantage of the existing high availability and storage technologies of the mailbox database. Public folder architecture uses specially designed mailboxes to store both the public folder hierarchy and the content. This also means that there's no longer a public folder database. High availability for the public folder mailboxes is provided by a database availability group (DAG). NOT BIn Exchange 2013, public folders were re-engineered using mailbox infrastructure to take advantage of the existing high availability and storage technologies of the mailbox database. There is no database-level setting in Exchange 2013. Exchange 2013 has a mailbox-level ability to specify the public folder mailbox, but by default Exchange auto-calculates the per-user hierarchy mailbox. NOT F Need to set it in the Singapore Office. Miami users still use the Miami servers to connect to the public folder hierarchy. A Need to create a public folder mailbox in the Singapore office. Use the Add-MailboxDatabaseCopy cmdlet to create a passive copy of an existing active

mailbox database. Use the Set-MailboxServer cmdlet to modify attributes on a computer running Microsoft Exchange Server 2013 with the Mailbox server role installed. In Exchange 2007 and Exchange 2010, you could specify which users had access to specific public folders. In Exchange 2013, you can set the default public folder mailbox per user. To do so, run the Set-Mailbox cmdlet with the DefaultPublicFolderMailbox parameter. This ensures that the users in the Singapore office connect to their local server to retrieve the public folder hierarchy.
