Analyticsジョブをペアリージョンの1つのリージョンにデプロイします。E. Azure Stream

Analyticsジョブをペアのリージョンの各リージョンにデプロイします。Answer: C, E Explanation:

Explanation Stream Analytics guarantees jobs in paired regions are updated in separate batches. As a result there is a sufficient time gap between the updates to identify potential breaking bugs and remediate them. Customers are advised to deploy identical jobs to both paired regions. In addition to Stream Analytics internal monitoring capabilities, customers are also advised to monitor the jobs as if both are production jobs. If a break is identified to be a result of the Stream Analytics service update, escalate appropriately and fail over any downstream consumers to the healthy job output. Escalation to support will prevent the paired region from being affected by the new deployment and maintain the integrity of the paired jobs. References:
