It is our biggest goal to try to get every candidate through the exam.

NEW QUESTION: 1 Why is the Branch2 network 10.1 0.20.0/24 unable to communicate with the Server farm1 network 10.10.10.0/24 over the GRE tunnel?
A. The GRE tunnel destination is not configured on the Branch2 router.
B. The static route points to the tunnel0 interface that is misconfigured on the Branch2 router.
C. The GRE tunnel destination is not configured on the R2 router.
D. The static route points to the tunnel0 interface that is misconfigured on the R2 router.
Answer: B
Explanation: The Branch2 network is communicating to the Server farm, which is connected to R2, via GRE Tunnel so we should check the GRE tunnel first to see if it is in "up/up" state with the "show ip interface brief" command on the two routers. On Branch2: On R2: We see interfaces Tunnel0 at two ends are "up/up" which are good so we should check for the routing part on two routers with the "show running-config" command and pay attention to the static routing of each router. On Branch2 we see: The destination IP address for this static route is not correct. It should be 192.168.24.1 (Tunnel0's IP address of R2), not 192.168.24.10 -> Answer C is correct. Note: You can use the "show ip route" command to check the routing configuration on each router but if the destination is not reachable (for example: we configure "ip route 10.10.10.0 255.255.255.0 192.168.24.10" on Branch2, but if 192.168.24.10 is unknown then Branch2 router will not display this routing entry in its routing table.

NEW QUESTION: 2 Given: Which group of method is moved to a new class when implementing the DAO pattern?
A. public int getId () public String getContractDetails() public String getName() public Person getPerson(int id) throws Exception
B. public Person getPerson(int id) throws Exception public void createPerson(Person p) throws Exception public void deletePerson(int id) throws Exception public void updatePerson(Person p) throws Exception
C. public int getId () public String getContractDetails () public void setContractDetails(String contactDetails) public String getName () public void setName (String name)
D. public void setContractDetails(String contractDetails) public void setName(String name)
Answer: B
Explanation: The methods related directly to the entity Person is moved to a new class. CRUD Note: DAO Design Pattern * Abstracts and encapsulates all access to a data source * Manages the connection to the data source to obtain and store data * Makes the code independent of the data sources and data vendors (e.g. plain-text, xml, LDAP, MySQL, Oracle, DB2)
D: Documents and Settings useralbo\Desktop1.jpg
Example (here Customer is the main entity):
public class Customer { private final String id; private String contactName; private String phone; public void setId(String id) { this.id = id; } public String getId() { return this.id; } public void setContactName(String cn) { this.contactName = cn; } public String getContactName() { return this.contactName; } public void setPhone(String phone) { this.phone = phone; } public String getPhone() { return this.phone; } } public interface

```
CustomerDAO { public void addCustomer(Customer c) throws DataAccessException; public
Customer getCustomer(String id) throws DataAccessException; public List getCustomers()
throws DataAccessException; public void removeCustomer(String id) throws
DataAccessException; public void modifyCustomer(Customer c) throws DataAccessException; }
57
```

NEW QUESTION: 3 For locations 3a, 1d and 3d, the diagram indicates hubs with lines that appear to be open and active. Assuming that is true, what control, if any, should be recommended to mitigate this weakness? **A.** Intelligent hub **B.** No controls are necessary since this is not a weakness **C.** Physical security and an intelligent hub **D.** Physical security over the hubs **Answer: C** **Explanation:** Explanation/Reference: Explanation: Open hubs represent a significant control weakness because of the potential to access a network connection easily. An intelligent hub would allow the deactivation of a single port while leaving the remaining ports active. Additionally, physical security would also provide reasonable protection over hubs with active ports.
