3つのAzureリージョンでホストされているApp1という名前のWebサーバーアプリがあります。
Azure Traffic

Managerを使用して、App1に対してトラフィックを最適に分散することを計画しています。
App1のネットワーク遅延データを監視するには、リアルユーザー測定を有効にする必要があります。
あなたは何をすべきか？回答するには、回答領域で適切なオプションを選択します。

注：それぞれの正しい選択は1ポイントの価値があります。**Answer:** Explanation: Explanation
Box 1: Select Generate key You can configure your web pages to send Real User Measurements to Traffic Manager by obtaining a Real User Measurements (RUM) key and embedding the generated code to web page. Obtain a Real User Measurements key The measurements you take and send to Traffic Manager from your client application are identified by the service using a unique string, called the Real User Measurements (RUM) Key. You can get a RUM key using the Azure portal, a REST API, or by using the PowerShell or Azure CLI. To obtain the RUM Key using Azure portal:
* From a browser, sign in to the Azure portal. If you don't already have an account, you can sign up for a free one-month trial.
* In the portal's search bar, search for the Traffic Manager profile name that you want to modify, and then click the Traffic Manager profile in the results that are displayed.
* In the Traffic Manager profile blade, click Real User Measurements under Settings.
* Click Generate Key to create a new RUM Key.
Box 2: Embed the Traffic Manager JavaScript code snippet. Embed the code to an HTML web page After you have obtained the RUM key, the next step is to embed this copied JavaScript into an HTML page that your end users visit. This example shows how to update an HTML page to add this script. You can use this guidance to adapt it to your HTML source management workflow.
* Open the HTML page in a text editor
* Paste the JavaScript code you had copied in the earlier step to the BODY section of the HTML (the copied code is on line 8 & 9, see figure 3).
