NEW QUESTION: 1A technician installs a new server that runs Windows Server 2012 R2.During the installation of Windows Server Update Services (WSUS) on the new server, the technician reports that on the Choose Languages page of the Windows Server Update Services Configuration Wizard, the only available language is English.The technician needs to download updates in French and English.What should you tell the network technician to do to ensure that the required updates are available?**A.** Add the French language pack to the server.**B.** Change the System Local of the server to French.**C.** Download WSUS 3.0 in French from the Microsoft Download Center.**D.** Install Microsoft SQL Server 2014, and then configure the default collation to include the accent- sensitive option.**E.** From the Windows Server Update Services Configuration Wizard, configure the server to use the Microsoft Update servers.**Answer: E** Explanation:Explanation/Reference:Explanation:If the server is configured to use an upstream server that does not have the required languages available, then the languages won't be available for you to select. If you configure the server to use the Microsoft Update servers, all language options will be available.Configure upstream servers to synchronize updates in all languages that are required by downstream replica servers. You will not be notified of needed updates in the unsynchronized languages.The Choose Languages page of the WSUS Configuration Wizard allows you to get updates from all languages or from a subset of languages. Selecting a subset of languages saves disk space, but it is important to choose all the languages that are needed by all the downstream servers and client computers of a WSUS server. Downstream servers and client computers will not receive all the updates they need if you have not selected all the necessary languages for the upstream server.Make sure you select all the languages that will be needed by all the client computers of all the downstream servers.

You should generally download updates in all languages on the root WSUS server that synchronizes to Microsoft Update. This selection guarantees that all downstream servers and client computers will receive updates in the languages that they require.To choose update languages for a downstream server: If the upstream server has been configured to download update files in a subset of languages:In the WSUS Configuration Wizard, click Download updates only in these languages (only languages marked with an asterisk are supported by the upstream server), and then select the languages for which you want updates.References: https://technet.microsoft.com/en-us/library/cc708431(v=ws.10).aspx
