**NEW QUESTION: 1**You have been doing your mobile application performance testing on a simulator. Why would you need to do some testing on a real device?**A.** Because simulators cannot run concurrent applications**B.** Because it is not possible to thoroughly test a simulator to ensure it is working correctly.**C.** Because a simulator is not an exact replica of the real device and may give different performance results.**D.** Because simulators cannot be cloned to provide enough devices to generate a realistic load**Answer: C****Explanation:**Explanation A is correct. A simulator is not a real device and doesn't have the hardware and connectivity characteristics that the real device has. B is not correct because you can thoroughly test a simulator, but that still won't get around the problem in A. C is not correct because this is precisely why simulators are used - they are easily cloned. D is not correct because simulators can certainly run concurrent applications

**NEW QUESTION: 2****A.** Option D**B.** Option B**C.** Option C**D.** Option A**Answer: A****Explanation:**Explanation The question states that the device worked on a different port. This indicates that the wiring is faulty.
