NEW QUESTION: 1ACME Rocket Sleds is growing, and so is their network. They have determined that they can no longer continue using static routes and must implement a dynamic routing protocol. They want to have data use multiple paths to the destinations, even if the paths are not equal cost. Which routing protocol has the ability to do this?**A. RIPv1****B. EIGRP****C. RIPv2****D. BGP****E. OSPF****F. IS-IS****Answer: B**
Explanation: Unlike most internal routing protocols, EIGRP has a really cool feature that allows you to share the load of your traffic across multiple links and not just links that have the same cost values. EIGRP allows you to make full use of your redundant links that could be in place just to have for back up but you are paying out a lot of money just to sit there and do nothing. EIGRP makes it easy for us the network engineers to make this happen. Before jumping in the in's and out lets run through a few things first when it comes to EIGRP Load Sharing, also refereed to as Load Balancing sometimes.

NEW QUESTION: 2The MED attribute is passed between AS, and the AS party that receives this attribute will advertise it to any other third-party AS.**A. TRUE****B. FALSE****Answer: A**

NEW QUESTION: 3Which type of Cisco Prime dashboard provides a broad overview of the health of the network and sites?**A. Service Health****B. Network Interface****C. Router Detail****D. Application View****Answer: A**

NEW QUESTION: 4Which method allows administrators to determine the best match impedance on analog voice ports in Cisco IOS router without having to shut and no shut the ports?**A. THL tone sweep****B. inject-tone local sweep****C. original tone sweep****D. remote loop****E. ECAN test****Answer: A**
Explanation: Explanation/Reference: Explanation: THL tone sweep allows all available impedances for a single test call to a quiet termination point out to the PSTN. You do not need to manually disable ECAN on the voice port under test. The test feature switches impedances automatically for the tester. The test feature calculates the arithmetic mean ERL and reports the mean for each channel profile at each impedance setting. Then, at the end of the test, the feature specifies the best match impedance setting. This test requires minimal supervision.
