Server1 is a file server that contains 3 TB of free disk space. HV1 hosts a virtual machine named VM1. The virtual machine configuration file for VM1 is stored in D:VM and the virtual hard disk file is stored in E:VHD. You plan to replace drive E with a larger volume. You need to ensure that VM1 remains available from HV1 while drive E is being replaced. You want to achieve this goal by using the minimum amount of administrative effort. What should you do?

B. Add HV1 and HV2 as nodes in a failover cluster. Perform a storage migration to HV2.
C. Perform a live migration to HV2.
D. Add HV1 and HV2 as nodes in a failover cluster. Perform a live migration to HV2.
Answer: A
Explanation: One of the great new features coming in Windows Server 2012 is Storage Migration for Hyper-V. Storage Migration allows an administrator to relocate the source files that make up a virtual machine to another location without any downtime. Storage Migration creates a copy of the file or files at the new location. Once that is finished, Server2012 does a final replication of changes and then the virtual machine uses the files in the new location.
