**NEW QUESTION: 1**FCoE interfaces are defined as which two port types? (Choose two.)**A.** VI Port **B.** VS Port**C.** VZ Port**D.** VE Port**E.** VF Port**Answer: D,E**Explanation:Section: (none)

Explanation/Reference:Explanation:VF PortBeginning in Cisco NX-OS Release 5.0(2)N1(1), vFC interfaces always operate in trunk mode; vFC interfaces do not operate in any other mode. You can configure allowed VSANs on a vFC by using theswitchport trunk allowed vsan command under the vfc interface (which is similar to FC TF and TE ports). For vFC interfaces that are connected to hosts, port VSAN is the only VSAN that supports logins (FLOGI). We recommend that you restrict the allowed VSANs for such vFC interfaces to the port VSAN by using theswitchport trunk allowed vsan command in the interface mode to configure a VF port.Cisco NX-OS Release 5.0(2)N1(1) includes support for 160 vFC interfaces.The vFC VSAN assignment and the global VLAN-to-VSAN mapping table enables the Cisco Nexus 5000 Series switch to choose the appropriate VLAN for a VF port.The VF port support over 10G-FEX interfaces feature is supported only in Cisco Nexus 2000 Series Fabric Extender straight-through topologies where each Fabric Extender is directly connected to a Cisco Nexus5000 Series switch.VE PortsA virtual E port (VE port) is a port that emulates an E port over a non-Fibre Channel link. VE port connectivity between Fibre Channel Forwarders (FCFs) is supported over point-to-point links. These links can be individual Ethernet interfaces or members of an Ethernet port-channel interface. For each of the FCF connected Ethernet interfaces you must create and bind an vFCinterface to the Ethernet interface.Configure vFC interfaces as VE ports by using the switchport mode e command in interface mode.VE ports have the following guidelines:Auto mode on the vFC is not supported.VE Port trunking is supported over FCoE-enabled VLANs.VE Port interface binding to MAC addresses is not supported.By default the VE Port is enabled for trunk mode.You can configure multiple VSANs on the VE port. You must configure the FCoE VLANs that correspond to the VE port's VSANs on the bound Ethernet interface.The Spanning Tree Protocol is disabled on the FCoE VLANs on any interface that a vFC interface is bound to, which includes the interfaces that the VE ports are bound to.Reference:
