NEW QUESTION: 4Which three statements accurately describe Layer 2 Ethernet switches? (Choose three.)**A.** Microsegmentation decreases the number of collisions on the network.**B.** Spanning Tree Protocol allows switches to automatically share VLAN information.**C.** Establishing VLANs increases the number of broadcast domains.**D.** If a switch receives a frame for an unknown destination, it uses ARP to resolve the address.**E.** In a properly functioning network with redundant switched paths, each switched segment will contain one root bridge with all its ports in the forwarding state. All other switches in that broadcast domain will have only one root port.**F.** Switches that are configured with VLANs make forwarding decisions based on both Layer 2 and Layer 3 address information.**Answer: A,C,E**Explanation:Explanation Microsegmentation is a network design (functionality) where each workstation or device on a network gets its own dedicated segment (collision domain) to the switch. Each network device gets the full bandwidth of the segment and does not have to share the segment with other devices. Microsegmentation reduces and can even eliminate collisions because each segment

is its own collision domain ->.Note: Microsegmentation decreases the number of collisions but it increases the number of collision domains.
