NEW QUESTION: 1 A system that delivers products or services at the correct time and in the correct quantities is referred to as **A. takt time B. kaizen C. single-piece flow D. just-in-time**
Answer: D

NEW QUESTION: 2 Your network contains an Active Directory domain named contoso.com. The Active Directory sites are configured as shown in the Sites exhibit. (Click the Exhibit button.) You need to ensure that DC1 and DC4 are the only servers that replicate Active Directory changes between the sites. What should you do? **A. Configure DC1 as a preferred bridgehead server for IP transport. B. From the DC1 server object, create a Connection object for DC4. C. Configure DC4 as a preferred bridgehead server for IP transport. D. From the DC4 server object, create a Connection object for DC1.**
Answer: A
Explanation: Reference: MCTS 70-640 Cert Guide: Windows Server 2008 Active Directory, Configuring (Pearson IT Certification, 2010) pages 193, 194
Bridgehead Servers A bridgehead server is the domain controller designated by each site's KCC to take control of intersite replication. The bridgehead server receives information replicated from other sites and replicates it to its site's other domain controllers. It ensures that the greatest portion of replication occurs within sites rather than between them. In most cases, the KCC automatically decides which domain controller acts as the bridgehead server. However, you can use Active Directory Sites and Services to specify which domain controller will be the preferred bridgehead server by using the following steps:
1. In Active Directory Sites and Services, expand the site in which you want to specify the preferred bridgehead server.
2. Expand the Servers folder to locate the desired server, right-click it, and then choose Properties.
3. From the list labeled Transports available for intersite data transfer, select the protocol(s) for which you want to designate this server as a preferred bridgehead server and then click add.

NEW QUESTION: 3 Which of the following is one of the questions that IT operations should consider when formulating risk action plans? **A. Do the operations staff know enough about the risk? B. Do the operations staff delegate the identification of a risk? C. Do the operations staff develop an information system to prevent a risk from occurring? D. Do the operations staff buy an information system to prevent a risk from occurring?**
Answer: A
