**NEW QUESTION: 1**Is this the minimum amount of archive data where a combination of iCAS and Scality should be positioned?Solution:50-150 TB with 10% growth**A. No****B. Yes****Answer: A**

**NEW QUESTION: 2**You are writing a dialog flow and you are at the end of the conversation. For the final state, you are not sure whether to use a return transition use a next transition that goes to the start of the dialog flow.Which statement is true?**A.** The next transition automatically clears variables on navigation, whereas return doesn't.**B.** The next transition can only be used for forward navigation in the flow.**C.** The next and return transitions are the same and you can use them interchangeably.**D.** The return transition goes to the start of the dialog flow and resets all variables, whereas next simply navigates.**Answer: C**

**NEW QUESTION: 3****Answer:** Explanation:

**NEW QUESTION: 4**Testlet: Proseware, IncYou need to recommend a solution for configuring the Automatic Updates settings on the VMs.What should you include in the recommendation? Case Study Title (Case Study): COMPANY OVERVIEWProseware, Inc. is a publishing company that has a main office and a branch office.The main office is located in New York. The branch office is located in Sydney. The main office has 5,000 users. The branch office has 1,000 users. PLANNED CHANGESProseware plans to deploy a new 64-bit application named App2 to 10 users in the branch office. Only members of the local Administrators group can run App2. Proseware is evaluating whether to deploy virtual desktop pools. The virtual desktop pools must meet the following requirements:Apply the settings in GPO1 to the virtual machines (VMs).Prevent the VMs from receiving the Automatic Updates settings from GPO2.Ensure that only the host VM is affected if a virtual hard disk (VHD) file becomes corrupt.Minimize the amount of storage used to support the VMs.Minimize the amount of memory and CPU resources used by the VMs.Minimize administrative effort.EXISTING ENVIRONMENTAll servers run either Windows Server 2008 or Windows Server 2008 R2. All of the client computers in the

main office run Windows 7. All of the client computers in the branch office run Windows XP (x86) with Service Pack 3 (SP3). All of the client computers in the main office are configured as Microsoft Enterprise Desktop Visualization (MED-V) and Microsoft Application Virtualization (App-V) clients. A two-node Hyper-V cluster is deployed in the main office. The cluster uses Clustered Shared Volumes. Existing Active Directory/Directory Services The network contains a single Active Directory domain named proseware.com. The functional level of the forest is Windows Server 2008. The relevant organizational units (OUs) for the domain are configured as shown in the following table. A custom Group Policy object (GPO) named GPO1 is linked to the domain, GPO1 contains corporate computer security settings. A custom GPO named GPO2 is linked to both office OUs. GPO2 contains Windows Server Update Services (WSUS) settings.

Existing Network Infrastructure Each office has servers that have the following server roles or role services installed:

- WSUS
- Hyper-V
- File Services
- Remote Desktop Web Access (RD Web Access)
- Remote Desktop Session Host (RD Session Host)
- Remote Desktop Virtualization Host (RD Virtualization Host)
- Remote Desktop Connection Broker (RD Connection Broker)

**REQUIREMENTS** Technical Requirements When users interactively logs on to any of the client computers in the branch office, they must automatically receive the local administrator rights to that computer. When users logs off, they must lose the administrator rights. The disk space on all file servers must be monitored. If any file server has less than 20% free disk space on a volume, a script must run that deletes temporary files.

**Problem Statements** The main office has a shared folder named Legal. The Legal share is only accessed by users in the legal department. Legal department users report that it takes a long time to locate files in the Legal share by using keyword searches.

**A. Security filtering**  
**B. Loopback processing**  
**C. Block inheritance**  
**D. WMI filtering**

**Answer:** **D** Explanation: Explanation/Reference: As no child OU is designed for those VMs, option A (Block inheritance) is ruled out. As WSUS setting is configured in the computer configuration of a GPO, option B (Loopback processing) is not helpful. As no security group is designed for those VMs, option C "Security filtering" is excluded.

**WINDOWS MANAGEMENT INSTRUMENTATION FILTER** The WMI filter can be used to control the application of GPOs. EACH GPO can be linked to ONE WMI filter, however, the same WMI filter can be linked to multiple GPOs. The WMI filter is evaluated on the destination computer (running either Windows XP or later, or Windows Server 2003 or later) during processing of Group Policy. The GPO will only apply if the WMI filter evaluates to TRUE. On Windows 2000-based computers, the WMI filter is ignored and the GPO is always applied.
