これは、サーバーで発生したことを示していますか？**A. 無効なメモリ構成****B. iLOが開始した再起動****C. 電源障害****D. 過熱したシステム****Answer: C**

NEW QUESTION: 2Which two elements are required to allow single sign-on in Office 365? (Each correct answer presents part of the solution- Choose two.)**A. the Windows Azure Active Directory Sync tool****B. separate credentials for signing in to the on-premises domain and the Office 365 services****C. an on-premises "source of authority" Active Directory server****D. two-factor authentication****Answer: A,C**

Explanation:The single sign-on experience is more complex to implement. It requires planning your account strategy and your on-premises hardware implementation. SSO consists of using either Active Directory synchronization with password synchronization or directory synchronization with Active Directory Federation Services (AD FS) 2.0. Both these access control options require an implementation of the Windows Azure Active Directory Sync tool.
Incorrect:not B: Single sign-on experience. Your users type the same user ID and password that they use to access both their Active Directory corporate network and their Office 365 services.

NEW QUESTION: 3Refer to the exhibit. An IP phone user cannot log in to their Cisco Unity Connection voice mailbox with their PIN. Database Writer I/O is considered to be the highest priority I/O and is managed based on attributes of the IORM plan.****B. If two consumer groups P and Q In the PROD database get 20% and 10% respectively of resource allocation, then the percentage of I/O resource would be the same if they got 10% and 5% respectively, and the Interdatabase plan has changed, provided that the category plan is unchanged, and consumer groups A and B are still mapped to the same categories.****C. If two consumer groups A and B in the PROD database get 10% and 15% respectively of resource allocation, then the percentage of I/O resource would be the same if they got 20% and 30% respectively, provided that the category plans and inter database plans are unchanged, and consumer groups A and B are still mapped to the same category.****D. Log Writer I/O and Control File I/O are high priority I/O managed automatically by IORM.****E. If two consumer groups C and D In the PROD database get 10% and 15% respectively of resource allocation, then the percentage of I/O resource would be the same if they still got 10% and 15% respectively and were remapped to a different category by the DBA, provided that the category plans and Interdatabase plans are unchanged.****Answer: B,D**
Explanation:*(not A, Not B) Rules in an interdatabase resource plan specify allocations to databases, not consumer groups.*IORM RulesIORM is only "engaged" when needed./ (D) Redo and control file writes always take precedence./ (Not E) DBWR (database writer) writes are

scheduled at the same priority as user IO./ IORM does not intervene if there is only one active consumer group on one database./ Any disk allocation that is not fully utilized is made available to other workloads in relation to the configured resource plans./ Background IO is scheduled based on their priority relative to user IO./ For each cell disk, each database accessing the cell has one IO queue per consumer group and three background queues Note: *Use IORM metrics to track / I/O load per Consumer Group (IOPS, MBPS, disk utilization %) / I/O throttling per Consumer Group Reference: Using IORM with Exadata
