So it is a well advised action to choose our materials.

NEW QUESTION: 1 Ann, a systems engineer, is working to identify an unknown node on the corporate network. To begin her investigative work, she runs the following nmap command string: `user@hostname:~$ sudo nmap -O 192.168.1.54` Based on the output, nmap is unable to identify the OS running on the node, but the following ports are open on the device: TCP/22 TCP/111 TCP/512-514 TCP/2049 TCP/32778 Based on this information, which of the following operating systems is MOST likely running on the unknown node? **A.** Linux **B.** OSX **C.** Solaris **D.** Windows **Answer: C**

NEW QUESTION: 2 You have a server named Server1 that runs Windows Server 2012 R2. You plan to enable Hyper-V Network Virtualization on Server1. You need to install the Windows Network Visualization Filter Driver on Server1. Which Windows PowerShell cmdlet should you run? **A.** Enable-NetAdapterBinding **B.** Set-NetAdapterVmq **C.** Add - WindowsFeature **D.** Set-NetVirtualizationGlobal **Answer: A** **Explanation:** Explanation Hyper-V Network Virtualization runs multiple virtual networks on a physical network. And each virtual network operates as if it is running as a physical network. The Set-NetAdapter cmdlet sets the basic properties of a network adapter such as virtual LAN (VLAN) identifier (ID) and MAC address. Thus if you add the binding parameter to the command then you will be able to install the Windows Network Virtualization Filter Driver. **Step one:** Enable Windows Network Virtualization (WNV). This is a binding that is applied to the NIC that your External Virtual Switch is bound to. This can be a physical NIC, it can be an LBFO NIC team. Either way, it is the network adapter that your External Virtual Switch uses to exit the server. This also means that if you have multiple virtual networks or multiple interfaces that you can pick and choose and it is not some global setting. If you have one External Virtual Switch this is fairly easy: `$vSwitch = Get-VMSwitch -SwitchType External` # Check if Network Virtualization is bound # This could be done by checking for the binding and seeing if it is enabled `ForEach-Object -InputObject $vSwitch { if ((Get-NetAdapterBinding -ComponentID "ms_netwnv" -InterfaceDescription $_.NetAdapterInterfaceDescription).Enabled -eq $false) { # Lets enable it Enable-NetAdapterBinding -InterfaceDescription $_.NetAdapterInterfaceDescription -ComponentID "ms_netwnv" }`

NEW QUESTION: 3 A Solutions Architect is designing a web application. The web and application tiers need to access the Internet, but they cannot be accessed from the Internet. Which of the following steps is required? **A.** Launch Amazon EC2 instances in the public subnet and change the security group to allow outbound traffic on port 80. **B.** Launch a NAT gateway in the private subnet and deploy a NAT instance in the private subnet. **C.** Launch a NAT gateway in the public subnet and add a route to it from the private subnet. **D.** Attach an Elastic IP address to each Amazon EC2 instance and add a route from the private subnet to the public subnet. **Answer: C**

NEW QUESTION: 4

User2-11641655にKeyVault11641655のすべてのキー権限があることを確認する必要があります。このタスクを完了するには、Azureポータルにサインインし、Azureリソースを変更します。

Answer: Explanation: See the explanation below. **Explanation:** You need to assign the user the Key Vault Secrets Officer role. * In the Azure portal, type Key Vaults in the search box, select Key

Vaults from the search results then select KeyVault11641655. Alternatively, browse to Key Vaults in the left navigation pane.* In the key vault properties, select Access control (IAM).* In the Add a role assignment section, click the Add button.* In the Role box, select the Key Vault Secrets Officer role from the drop-down list.* In the Select box, start typing User2-11641655 and select User2-11641655 from the search results.* Click the Save button to save the changes.
