**NEW QUESTION: 1** Which of the following is not correct when executing the following line of code? `FileOutputStream fOut = openFileOutput("MyFile.txt", MODE_WORLD_READABLE);`  
**A.** File "MyFile.txt" is created in external memory.  
**B.** File "MyFile.txt" is created in internal memory.  
**C.** File created by this code is readable by other applications.  
**D.** File "MyFile.txt" is created in internal memory of application.  
**Answer: A**

**NEW QUESTION: 2** **HOTSPOT** Your network contains an Active Directory domain named contoso.com. The domain contains the users shown in the following table. You have a Network Policy Server (NPS) server that has the network policies shown in the following table. User1, User2, and User3 plan to connect to the network by using a VPN. You need to identify which network policy will apply to each user. What should you identify? To answer, select the appropriate policy for each user in the answer area.  
**Answer:** Explanation: Explanation: When you configure multiple network policies in NPS, the policies are an ordered list of rules. NPS evaluates the policies in listed order from first to last. If there is a network policy that matches the connection request, NPS uses the policy to determine whether to grant orderly access to the user or computer connection. Network policies are evaluated according to the processing order. Once a match is found, no further network policy is processed. Policies are processed in this order: -Policy2 (applies only to members of Group1) -Policy1 (applies to all users during specified time slot) -Policy3 (applies only to members of Group2) Since policy1 will always apply (sunday 0:00 to saturday 24:00 = always), policy3 will never be evaluated. Correct answer is : User1: Policy2 User2: Policy1 User3: Policy1
