NEW QUESTION: 2A. Option **CB.** Option **DC.** Option **AD.** Option **B****Answer: A**Explanation: ExplanationThe first step in using Elastic Beanstalk is to create an application, which represents your web application in AWS. In Elastic Beanstalk an application serves as a container for the environments that run your web app, and versions of your web app's source code, saved configurations, logs and other artifacts that you create while using Elastic Beanstalk. For more information on Applications, please refer to the below link:*
<http://docs.aws.amazon.com/elasticbeanstalk/latest/dg/applications.html>Deploying a new version of your application to an environment is typically a fairly quick process. The new source bundle is deployed to an instance and extracted, and then the web container or application server picks up the new version and restarts if necessary. During deployment, your application might still become unavailable to users for a few seconds. You can prevent this by configuring your environment to use rolling deployments to deploy the new version to instances in batches. For more information on deployment, please refer to the below link:*
