If you practice these questions **Valid Test C-S4TM-2023 Braindumps** seriously, you will pass the exam easily with high score.

NEW QUESTION: 1Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.You have the following line-of-business solutions:* ERP system* Online WebStore* Partner extranetOne or more Microsoft SQL Server instances support each solution. Each solution has its own product catalog.You have an additional server that hosts SQL Server Integration Services (SSIS) and a data warehouse. You populate the data warehouse with data from each of the line-of-business solutions. The data warehouse does not store primary key values from the individual source tables.The database for each solution has a table named Products that stored product information. The Products table in each database uses a separate and unique key for product records. Each table shares a column named ReferenceNr between the databases. This column is used to create queries that involve more than once solution.You need to load data from the individual solutions into the data warehouse nightly. The following requirements must be met:
* If a change is made to the ReferenceNr column in any of the sources, set the value of IsDisabled to True and create a new row in the Products table.* If a row is deleted in any of the sources, set the value of IsDisabled to True in the data warehouse.Solution: Perform the following actions:* Enable the Change Tracking for the Product table in the source databases.* Query the CHANGETABLE function from the sources for the updated rows.* Set the IsDisabled column to True for the listed rows that have the old ReferenceNr value.* Create a new row in the data warehouse Products table with the new ReferenceNr value.Does the solution meet the

goal?**A. Yes****B. No****Answer: B****Explanation:**ExplanationWe must check for deleted rows, not just updates rows.**References:**

NEW QUESTION: 2Note: This question is part of a series of questions that present the same scenario. Each question In the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.After you answer a question In this section, you will NOT be able to return to it. As a result, these questions will not appear In the review screen.**Your network contains an Active Directory domain named contoso.com. The domain contains multiple Hyper-V hosts.You need to deploy several critical line-of-business applications to the network; to meet the following requirements:***The resources of the applications must be isolated from the physical host.*Each application must be prevented from accessing the resources of the other applications.*The configurations of the applications must be accessible only from the operating system that hosts the application.**Solution:** You deploy a separate Windows container for each application.**Does this meet the goal?****A. Yes****B. No****Answer: A****Explanation:**By using Windows Container-The resources of the applications must be isolated from the physical host (ACHIEVED, as a single container could only access its own resources, but not others)-Each application must be prevented from accessing the resources of the other applications. (ACHIEVED, as a single container could only access its own resources, but not others)-The configurations of the applications must be accessible only from the operating system that hosts the application. (ACHIEVED, you can use DockerFile or DockerRun to push configurations to containers from the Container Host OS) **References:**
