Answer: AExplanation:A Virtual Private Cloud (VPC) is a virtual network dedicated to the user's AWS account. The user can create subnets as per the requirement within a VPC. The VPC is always specific to a region.The user can create a VPC which can span multiple Availability Zones by adding one or more subnets in each Availability Zone.The instance launched will always be in the same availability zone of the respective subnet.When creating an EBS the user cannot specify the subnet or VPC. However, the user must create the EBS in the same zone as the instance so that it can attach the EBS volume to the running instance.
