NEW QUESTION: 1A company is upgrading its 3,000 client computers to Office 365 ProPlus. The company uses the Telemetry Dashboard to identify document compatibility issues. The TelemetryAgent is deployed to all client computers. The telemetry environment is described in the following table.You need to ensure that telemetry data is collected for more than 20 client computers at a time.What should you do?**A.** Use Group Policy to set the MaxConnectionsPerServer setting to 100.**B.** Use the Registry Editor to trigger the data collection.**C.** Migrate the telemetry database to a computer that runs SQL Server 2008.**D.** Migrate the Telemetry Processor to a computer that runs Windows Server 2012.**Answer: D**
Explanation:Test or small production environments support computers running Windows 7, Windows 8, and Windows 8.1. These environments are, however, limited of 20 concurrent connections for client operating systems. You, therefore, have to migrate the Telemetry Processor to a computer that supports a larger production environment. Windows Server 2008, WindowsServer 2008 R2, Windows Server 2012, and Windows Server 2012 R2 are operating systems that are recommended for this type of environment.References:

NEW QUESTION: 2Which of the following describes a risk and mitigation associated with cloud data storage?**A.** Risk: Shared hardware caused data leakageMitigation: Strong encryption at rest**B.** Risk: Data loss from de-duplicationMitigation: Dynamic host bus addressing**C.** Risk: Combined data archivingMitigation: Two-factor administrator authentication**D.** Risk: Offsite replicationMitigation: Multi-site backups**Answer: A**
Explanation:With cloud data storage, the storage provider will have large enterprise SANs providing large pools of storage capacity. Portions of the storage pools are assigned to customers. The risk is that multiple customers are storing their data on the same physical hardware storage devices.This presents a risk (usually a very small risk, but a risk all the same) of other customers using the same cloud storage hardware being able to view your data. The mitigation of the risk is to encrypt your data stored on the SAN. Then the data would be unreadable even if another customer was able to access it.
