NEW QUESTION: 1 DRAG DROP A company's SharePoint environment contains a single web application with a root site collection that hosts the company intranet site. The company plans to allow project managers to create project-specific sites and assign permissions for those sites to project team members. The project sites will contain large files. You have the following requirements: - Create a separate area of the intranet site for the purpose of containing project sites. - Assign a distinct URL to the project site area. - Ensure that project managers can create project sites and add users to project sites. - Ensure that project site data is stored separately from other intranet site content. You need to create and configure the project site area. Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.) Select and Place:
Answer: Explanation: Explanation: Box 1: In the root site for the site collection, grant project managers permission to create sites and add users to the sites. Box 2: In Central Administration, create a managed path for the web application. Box 3: In a content database separate from that of the intranet site, create a site collection under the managed path. Note: * When you define managed paths, you can specify the paths in the URL namespace of a web application to use for site collections. You can specify that one or more site collections exist at a specified path. This can be a convenient method of combining multiple site access for users in various departments. Reference: Define managed paths in SharePoint Server 2013
