NEW QUESTION: 1 DRAG DROP You need to provide a data access solution for the NorthRide app. Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer: Explanation: Box 1: Create a service namespace under Service Bus
Box 2: Obtain the default management credentials for the namespace.
Box 3: Configure the application to use Service Bus Relay
Box 4: Configure Service Bus Queue
Note: Box 1: Create a service namespace under Service Bus
To begin using Service Bus queues in Azure, you must first create a service namespace. A namespace provides a scoping container for addressing Service Bus resources within your application.
Box 2: Obtain the default management credentials for the namespace.
In order to perform management operations, such as creating a queue on the new namespace, you must obtain the management credentials for the namespace.
Box 3: Configure the application to use Service Bus Relay
When you create an application that uses Service Bus, you must add a reference to the Service Bus assembly and include the corresponding namespaces. The Service Bus NuGet package is the easiest way to get the Service Bus API and to configure your application with all of the Service Bus dependencies. After installing this package you are now ready to write code for Service Bus.
Box 4: Configure Service Bus Queue
This would include:
* set up a Service Bus connection string
* create a queue
* provide code to send/receive messages from the queue
