NEW QUESTION: 1 You have two servers named Server1 and Server2. Both servers run Windows Server 2008 R2. Server1 is configured as an Enterprise Root certification authority (CA). You install the Online Responder role service on Server2. You need to configure Server2 to issue certificate revocation lists (CRLs) for the Enterprise Root CA. Which two tasks should you perform? (Each correct answer presents part of the solution. Choose two.) **A.** Import the OCSP Response Signing certificate. **B.** Set the Startup Type of the Certificate Propagation service to Automatic. **C.** Import the Enterprise Root CA certificate. **D.** Add the Server1 computer account to the CertPublishers group. **Answer: A, C** Explanation: Server2 is configured as an Online Responder, so it needs an OCSP Response Signing certificate to perform its duties (issuing modified CRLs on behalf of the Enterprise Root CA). Without the Enterprise Root CA server certificate, however, it will not be able to do this. The CertPublishers group determines who can publish certificates. An Online Responder does not publish certificates. The Certificate Propagation service on a machine is used to process smartcard logons for that machine.
