With years of experience dealing with exam, they have thorough grasp of knowledge which appears clearly in our OGBA-101 actual exam.

NEW QUESTION: 1A customer has established an AWS Direct Connect connection to AWS. The link is up and routes are being advertised from the customer's end, however the customer is unable to connect from EC2 instances inside its VPC to servers residing in its datacenter. Which of the following options provide a viable solution to remedy this situation? (Choose 2 answers) **A.** Enable route propagation to the virtual pinnate gateway (VGW). **B.** Add a route to the route table with an iPsec VPN connection as the target. **C.** Enable route propagation to the customer gateway (CGW). **D.** Modify the Instances VPC subnet route table by adding a route back to the customer's on-premises environment. **E.** Modify the route table of all Instances using the 'route' command. **Answer: A,D**

NEW QUESTION: 2A developer is provided with an HTTPS clone URL for an AWS CodeCommit repository. What needs to be configured before cloning this repository? **A.** Use AWS KMS to set up public and private keys for use with CodeCommit. **B.** Use AWS certificate manager to provision public and private SSL/TLS certificates. **C.** Generate encryption keys using AWS CloudHSM, then export the key for use with AWS CodeCommit. **D.** Set up the Git credential

helper to use an AWS credential profile, and enable the helper to send the path to the repositories.**Answer: D**Explanation:AWS credential profile, and enabling the Git credential helper to send the path to repositories:Reference:
<https://docs.aws.amazon.com/codecommit/latest/userguide/setting-up-https-unixes.html>

NEW QUESTION: 3For this question, refer to the JencoMart case study.The JencoMart security team requires that all Google Cloud Platform infrastructure is deployed using a least privilege model with separation of duties for administration between production and development resources. What Google domain and project structure should you recommend?**A.** Create a single G Suite account to manage users with one project for the development/test/staging environment and one project for the production environment.**B.** Create a single G Suite account to manage users with each stage of each application in its own project.**C.** Create two G Suite accounts to manage users: one with a single project for all development applications and one with a single project for all production applications.**D.** Create two G Suite accounts to manage users: one for development/test/staging and one for production. Each account should contain one project for every application.**Answer: D**Explanation:Topic 4, Dress4Win case study
Company OverviewDress4win is a web-based company that helps their users organize and manage their personal wardrobe using a website and mobile application. The company also cultivates an active social network that connects their users with designers and retailers. They monetize their services through advertising, e-commerce, referrals, and a freemium app model.
Company BackgroundDress4win's application has grown from a few servers in the founder's garage to several hundred servers and appliances in a colocated data center. However, the capacity of their infrastructure is now insufficient for the application's rapid growth. Because of this growth and the company's desire to innovate faster, Dress4win is committing to a full migration to a public cloud.
Solution ConceptFor the first phase of their migration to the cloud, Dress4win is considering moving their development and test environments. They are also considering building a disaster recovery site, because their current infrastructure is at a single location. They are not sure which components of their architecture they can migrate as is and which components they need to change before migrating them.
Existing Technical EnvironmentThe Dress4win application is served out of a single data center location.
* Databases:
* Application servers:
* Storage appliances:
* Apache Hadoop/Spark servers:
* MQ servers:
* Miscellaneous servers:
Business Requirements
* Build a reliable and reproducible environment with scaled parity of production.
* Improve security by defining and adhering to a set of security and Identity and Access Management (IAM) best practices for cloud.
* Improve business agility and speed of innovation through rapid provisioning of new resources.
* Analyze and optimize architecture for performance in the cloud.
* Migrate fully to the cloud if all other requirements are met.
Technical Requirements
* Evaluate and choose an automation framework for provisioning resources in cloud.
* Support failover of the production environment to cloud during an emergency.
* Identify production services that can migrate to cloud to save capacity.
* Use managed services whenever possible.
* Encrypt data on the wire and at rest.
* Support multiple VPN connections between the production data center and cloud environment.
CEO StatementOur investors are concerned about our ability to scale and contain costs with our current infrastructure. They are also concerned that a new competitor could use a public cloud platform to offset their up-front investment and freeing them to focus on developing better features.
CTO StatementWe have invested heavily in the current infrastructure, but much of the equipment is approaching the end of its useful life. We are consistently waiting weeks for new gear to be racked before we can start new projects. Our traffic patterns are highest in the mornings and weekend evenings; during other times, 80% of our capacity is sitting idle.
CFO StatementOur capital expenditure is now exceeding our quarterly projections. Migrating to the cloud will likely cause an initial increase in spending, but we expect to fully transition before our next hardware refresh cycle. Our total cost of ownership (TCO) analysis over the next 5 years puts a cloud strategy between 30 to 50% lower than our current model.

NEW QUESTION: 4A. NoB. YesAnswer: A
