**NEW QUESTION: 3** After installing and customizing an Oracle Solaris 11 non-global (solaris brand) zone, you execute commands: # zonecfg -z myzone 'set

file-mac-profile=fixed-configuration'# zoneadm -z myzone reboot What is the impact of making this specific change? **A.** This change restricts user access to objects in the zone based upon their Oracle Solaris Trusted Extension labels. **B.** This change prevents the zone from being able to mount any remote file systems on the zone has been booted. **C.** This enables support within the zone for Mac OS X extended file attributes for the zone root file system. **D.** This change forces the zone root file system into a read-only state where only parts of /var are writable. **E.** This change prevents MAC address spoofing by requiring outbound network packets to have a predefined value. **Answer: D** Explanation: Through the zonecfg utility, the file-mac-profile can be set to one of the following values (see note below). All of the profiles except none will cause the /var/pkg directory and its contents to be read-only from inside the zone. \*none Standard, read-write, non-global zone, with no additional protection beyond the existing zones boundaries. Setting the value to none is equivalent to not setting file-mac-profile property. \*strict \*fixed-configuration Permits updates to /var/\* directories, with the exception of directories that contain system configuration components. IPS packages, including new packages, cannot be installed. Persistently enabled SMF services are fixed. SMF manifests cannot be added from the default locations. Logging and auditing configuration files can be

local. syslog and audit configuration are fixed.\* flexible-configuration  
Note:zonecfg file-mac-profile PropertyBy default, the zonecfg file-mac-profile property is not set in a non-global zone. A zone is configured to have a writable root dataset.In a solaris read-only zone, the file-mac-profile property is used to configure a read-only zone root.A read-only root restricts access to the runtime environment from inside the zone.Reference:Oracle Solaris Administration: Oracle Solaris Zones, Oracle Solaris 10 Zones, andResource Management
