**NEW QUESTION: 2** Your network contains one Active Directory forest named contoso.com. The forest contains two child domains and six domain controllers. The domain controllers are configured as shown in the following table. For the contoso.com domain, a company policy states that administrators must be able to retrieve a list of all the users who have not logged on to the network in the last seven days from any domain controller. You need to ensure that the users' last logon information from the last seven days is replicated to all of the domain controllers. What should you use?  
**A.** Set-ADSite  
**B.** Set-ADGroup  
**C.** Set-ADForest  
**D.** Set-ADReplicationSiteLink  
**E.** Set-ADReplicationSite  
**F.** Set-ADDomain  
**G.** Netdom  
**Answer: F**  
Explanation: The Set-ADDomain LastLogonReplicationInterval parameter specifies the time, in days, within which the last logon time of an account must be replicated across all domain controllers in the domain. This parameter sets the LastLogonReplicationInterval property for a domain. The LDAP display name (ldapDisplayName) for this property is msDS-LogonTimeSyncInterval. The last logon replication interval must be at least one day. Setting the last logon replication interval to a low value can significantly increase domain-wide replication.
