NEW QUESTION: 1A company wishes to raise additional debt finance and is assessing the impact this will have on key ratios. The following data currently applies: * Profit before interest and tax for the current year is \$500,000 * Long term debt of \$300,000 at a fixed interest rate of 5% * 250,000 shares in issue with a share price of \$8 The company plans to borrow an additional \$200,000 on the first day of the year to invest in new project which will improve annual profit before interest and tax by \$24,000. The additional debt would carry an interest rate of 3%. Assume the number of shares in issue remain constant but the share price will increase to \$8.50 after the investment. The rate of corporate income tax is 30%. After the investment, which of the following statements is correct? **A.** Interest cover will fall; P/E ratio will fall. **B.** Interest cover will rise; P/E ratio will rise. **C.** Interest cover will rise; P/E ratio will fall. **D.** Interest cover will fall; P/E ratio will rise. **Answer: D**

NEW QUESTION: 2A bank uses Power Platform apps and flows to support business processes. The company would like to use historical client data to predict whether a client's loan application is likely to be approved or rejected. You need to use AI Builder to implement the solution. Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer: Explanation: Explanation: Step 1: Import data into Common Data Service. AI Builder requires the use of Common Data Service, which is the data platform for PowerApps and allows you to store and manage business data. Common Data Service is the platform on which Dynamics 365 apps are built so if you're a Dynamics 365 customer, your data is already in Common Data Service. Step 2: Train the model Step 3: Publish the model The last step is to publish your model. Step 4: Use the model in PowerApps or Microsoft Flow. NEW QUESTION: 3For some reason, servers in your domain are failing. The host machines are pingable and the WebLogic JVM processes are running but the getState() method on the ServerRuntimeMBean reports FAILED. In the future, when this happens, you want these failed servers to be shut down and then restarted automatically without human intervention. At the same time, you want to constrain how much time will be spent restarting those servers and how many restart attempts will be made. Pick the two options that would help with this situation. (Choose two.) **A.** For each server (or cluster), set RestartInterval to an appropriate

positive integer. **B.** When starting Node Manager, use the WLST nmStart command and pass in a WLST properties object with RestartMax set to an appropriate positive integer. **C.** Make sure all managed servers are members of a cluster with ReplicationGroupsEnabled set to true. **D.** Start the servers by executing the restartManagedWebLogic.sh script in the domain's/bin directory.

Answer: B,D Explanation: **B:** The nmStart command identifies the server instance to start. You define the number of restarts by setting the RestartMax property in a Node Manager startup.properties file. If you use the nmStart command with WLST connected to a Node Manager, Node Manager supports monitoring, stopping, and restarting the Administration Server. **C:** The script named startManagedWebLogic can be used to start Managed Servers. On a UNIX system it is located in DOMAIN_NAME/bin/startManagedWebLogic.sh.

NEW QUESTION: 4 Residco, Inc. expects net income of \$800,000 for the next fiscal year. Its targeted and current capital structure is 40 percent debt and 60 percent common equity. The director of capital budgeting has determined that the optimal capital spending for next year is \$1.2 million. Residco does not plan to issue any new common equity next year. If Residco follows a strict residual dividend policy, what is the expected dividend payout ratio for next year? **A.** 40.0 percent. **B.** 10.0 percent. **C.** 90.0 percent. **D.** 66.7 percent. **Answer: B** Explanation: Choice "d" is correct. A strict dividend policy guides a company's management to pay no more (and no less) in dividends from net income to generate a change in equity that produces or maintains a targeted capital structure. The dividend pay out ratio is the ratio of dividends to income. The call of the question requires the calculation of the ratio of dividends to income assuming income, capital projects and capital structure amounts as follows: Assuming the company is in compliance with the 40/60 Debt/Equity capital structure to begin with, 60% of the \$1,200,000 in capital projects will be financed by additions to equity that come from new earnings of \$800,000. The equity funded portion of capital projects is \$720,000 ($\$1,200,000 \times 60\%$). Following a strict residual dividend policy, the company will pay out the difference between additions to equity (\$800,000 in income) and the amounts reinvested in the business (\$720,000). The dividend will be \$80,000. ($\$800,000 - \$720,000$). The dividend payout ratio is, therefore, 10% ($\$80,000$ in dividends / $\$800,000$ in income). Choices "a", "b", and "c" are incorrect, per the above calculation.
