Based on this, which of the following are correct? **A.** After HUAWEI OceanStor 9000 processes the request for reading the file X from client1, the system reserves the message on both node A and node B. **B.** If the system monitors that node B has cached file X, then node A can read the file from node B. **C.** If the system monitors that node A has cached file X, then node A only caches the data of file X and does not cache its verification data. **D.** If the system has monitored the file X has been cached on Node B, the client client1 can read the file directly from Node B. **Answer: B,C**

**NEW QUESTION: 3** 802.1Xの段階的モードの展開中に、どの展開モードが最初に利用されますか? **A.** シングルホストモード **B.** モニター **C.** 影響が少ない **D.** クローズ **Answer: B** Explanation: 802.1X can be implemented using a phased deployment model that allows for limited impact on network access while gradually introducing authentication and authorization. In the phased approach, the network administrators can gain visibility who will succeed and who will fail, determine the failure reason, and remediate the problem before enabling a stronger enforcement mode. The three modes are monitor, low impact, and closed mode. A phased deployment will utilize monitor mode first and then will shift to either low impact mode or closed mode. The three 802.1X deployment modes are monitor, low impact, and closed mode. **A**

phased deployment will utilize monitor mode first and then will shift to either low impact mode or closed mode. With low-impact mode, you are able to strengthen the security stance by adding an ingress ACL to the 802.1X-enabled switch port that is configured in open mode. This ACL provides the ability to maintain whatever basic connectivity is required for unauthenticated hosts. The three 802.1X deployment modes are monitor, low impact, and closed mode. A phased deployment will utilize monitor mode first and then will shift to either low impact mode or closed mode. The default behavior on a Cisco switch port configured for 802.1X is closed mode. With closed mode, only EAPOL traffic is allowed until the authentication process completes. Authentication is required before any basic network services are available, including DHCP. Consideration of 802.1X timers is very important with closed mode. Single host mode is one of the 802.1X host modes, not a phased deployment mode. Single host mode allows only one client to be connected to an 802.1X-enabled port. Access is provided for the client after authentication. Packets from other hosts are dropped. If the client leaves or is replaced with another client, the switch changes the port link state to down, and the port returns to the unauthorized state.
