NEW QUESTION: 3 Test Management You are working on a project to develop an authentication system for an e-commerce website. This system provides two features: Registration and authentication. Two different development teams develop these two features. There is a high likelihood that the delivery of the authentication feature to the test team will be three weeks later. To complete the registration the user must provide the following registration inputs: Name, surname, birthdate, fiscal code and he/she can select a username and a password. A registered user can be a special user or a normal user. To be identified as a special user, he/she must also provide, during the registration process, a voucher possibly received from the IT department. Access is granted only if a user is registered and the password is correct: In all other cases access is denied. If the registered user is a special user and the password is wrong, a special warning is shown on the system console. You are currently performing a quality risk analysis using FMEA. Based only on the given information, which of the following is NOT a product risk that could be identified during the quality risk analysis? **A.** The authentication

system denies access for a special user with a wrong password, but doesn't display a special warning on the system console**B**. The authentication system grants access to a special user with a wrong password**C**. The late delivery of the authentication feature to the test team causes delays in the start of test execution and this could result in a shorter test period**D**. The authentication system grants access to a normal user with a wrong password**Answer: C**
