E. The worker must select the goal from the goal library.
F. The goal plan must be assigned to the worker's department.
G. The goal must have the same Start Date as the goal plan.
Answer: B,D,G

NEW QUESTION: 2 How is network layer addressing accomplished in the OSI protocol suite?
A. Network Service Access Point address
B. Media Access Control address
C. Packet Layer Protocol address
D. Authority and Format Identifier address
E. Internet Protocol address
Answer: A
Explanation: OSI network-layer addressing is implemented by using two types of hierarchical addresses: network service access-point addresses and network-entity titles. A network service-access point (NSAP) is a conceptual point on the boundary between the network and the transport layers. The NSAP is the location at which OSI network services are provided to the transport layer. Each transport-layer entity is assigned a single NSAP, which is individually addressed in an OSI internetwork using NSAP addresses. Network Service Address Point (NSAP) address is the equivalent of an IP address for an OSI network; A NSAP address is a hexadecimal address with a length of up to 40 hexadecimal digits. NSAP addresses are used in ATM and IS-IS.

NEW QUESTION: 3 You have a Power BI model that contains a table named Sales. Sales contains columns named SalesAmount, OrderDate, SalesPerson, and OrderID. You need to create a measure to calculate the last 12 months of sales. You must start from the last date a sale was made and ignore any filters set on the report. How should you complete the DAX formula? To answer, drag the appropriate values to the correct targets. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point.
Answer: Explanation:
