NEW QUESTION: 2 You have a Microsoft Azure SQL database. Some queries take a long time to execute. You need to identify whether any of the long-running queries prevent users from updating data in the database. Which query should you execute? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.
Answer: Explanation: Explanation Box 1: sys.dm_tran_locks returns information about currently active lock manager resources in SQL Server 2017. Each row represents a currently active request to the lock manager for a lock that has been granted or is waiting to be granted. Box 2: sys.dm_os_waiting_tasks.sys.dm_tran_locks.lock_owner_address is the memory address of the internal data structure that is used to track this request. This column can be joined with the resource_address column in sys.dm_os_waiting_tasks.
