NEW QUESTION: 3

管理ネットワーク内でより高いセキュリティを提供するために管理者が実装できる方法はどれですか？（2つ選択してください。） **A.** コミュニティストリング **B.** NTP **C.** SNMPv3 **D.** 隔離VLAN **E.** ポートミラーリング **Answer: C** Explanation: A: Simple Network Management Protocol (SNMP) is an Internet-standard protocol for collecting and organizing information about managed devices on IP networks and for modifying that information to change device behavior. Three significant versions of SNMP have been developed and deployed. SNMPv1 is the original version of the protocol. More recent versions, SNMPv2c and SNMPv3, feature improvements in performance, flexibility and security. B: The SNMP Read-Only Community String is like a password. It is sent along with each SNMP Get-Request and allows (or denies) access to device. Most network vendors ship their equipment with a default password of "public". (This is the so-called "default public community string".) Many network administrators change the community string to keep intruders from getting information about the network setup. This is a good idea. Even if it's only read-access, an intruder can learn a lot about a network that could be used to compromise it. 参照：
