NEW QUESTION: 2HOTSPOTYour network contains an Active Directory domain named adatum.com. The domain contains a server named Server1.Your company implements DirectAccess.A user named User1 works at a customer's office. The customer's office contains a server named Server1.When User1 attempts to connect to Server1, User1 connects to Server1 in adatum.com.You need to provide User1 with the ability to connect to Server1 in the customer's office.Which Group Policy option should you configure?To answer, select the appropriate option in the answer area.Hot Area:**Answer:** Explanation:Explanation/Reference: Explanation:By selecting the Prefer local DNS names option, you disable name resolution through corporate network DNS servers and use whatever normal name resolution is available to your client computers. This enables you to access computers like your Windows Home Server by name, but it prevents you from accessing any corporate resources by name.Note: When you are on a remote network that is using DirectAccess, all of the name queries from your computer that resolve friendly DNS names that match your organization's DNS name are sent

to your corporate DNS name server. Short names are combined with your organization's DNS name. This enables short names for intranet resources such as http://hrweb or \public to be accessible to you in your remote location. However, this has the effect of making resources on your locally connected network with the same name no longer available by their short name.

NEW QUESTION: 3 You use Amazon Cloud Watch as your primary monitoring system for your web application. After a recentsoftware deployment, your users are getting Intermittent 500 Internal Server Errors when using the webapplication. You want to create a Cloud Watch alarm, and notify an on-call engineer when these occur. Howcan you accomplish this using AWS services? Choose three answers from the options given below**A.** Install a CloudWatch Logs Agent on your servers to stream web application logs to CloudWatch.**B.** Use Amazon Simple Notification Service to notify an on-call engineer when a CloudWatch alarm istriggered.**C.** Deploy your web application as an AWS Elastic Beanstalk application. Use the default Elastic Beanstalk Cloudwatch metrics to capture 500 Internal Server Errors. Set a CloudWatch alarm on thatmetric.**D.** Use Amazon Simple Email Service to notify an on-call engineer when a CloudWatch alarm is triggered.**E.** Create a CloudWatch Logs group and define metric filters that capture 500 Internal Server Errors. Set aCloudWatch alarm on that metric.**Answer: A,B,E** Explanation:ExplanationYou can use Cloud Watch Logs to monitor applications and systems using log dataCloud Watch Logs uses your log data for monitoring; so, no code changes are required. For example, you canmonitor application logs for specific literal terms (suchas "NullReferenceCxception") or count the number of occurrences of a literal term at a particular position inlog data (such as "404" status codes in an Apacheaccess log). When the term you are searching for is found. Cloud Watch Logs reports the data to aCloudWatch metric that you specify. Log data is encrypted while intransit and while it is at restFor more information on Cloudwatch logs please refer to the below link:* http://docs
