NEW QUESTION: 3 Which OSI layer header contains the address of a destination host that is on another network?
A. transport
B. physical
C. network
D. data link
E. session
F. application
Answer: C
Explanation: Only network address contains this information. To transmit the packets the sender uses network address and data link address. But the layer 2 address represents just the address of the next hop device on the way to the sender. It is changed on each hop. Network address remains the same.
