NEW QUESTION: 3You have a datacenter that contains six servers. Each server has the Hyper-V server role installed and runs Windows Server 2012 R2. The servers are configured as shown in the following table.Host4 and Host5 are part of a cluster named Cluster1. Cluster1 hosts a virtual machine named VM1.You need to move VM1 to another Hyper-V host. The solution must minimize the downtime of VM1.To which server and by which method should you move VM1?**A.** To Host3 by using a storage migration**B.** To Host6 by using a storage migration**C.** To Host2 by using a live migration**D.** To Host1 by using a quick migration**Answer: A****Explanation:**With Hyper-V live migration, you can move running VMs from one Hyper-V physical host to another without any disruption of service or perceived downtime.Host3 has an Intel processor, as does Host4 and Host5 in Cluster1, so the migration will work fine.**Incorrect:**Not B, not C: The migration of a virtual machine between physical computers is only supported on computers that have the same processor stepping or are from the same vendor. Therefore you cannot move a virtual machine from a Hyper-V host on an Intel-based server to a Hyper-V Host on an AMD-based server.**Not D:** Quick Migration saves, moves and restores VMs, which results in some downtime.**Reference:** Hyper-V Migration Guide
