Comparing to PDF version which may be printed out and used on paper, these two versions of SC-300 Test Simulates should be used on electronic device, Considerable benefits.

The SC-300 training vce offered by Photoexperienceacademy will be the best tool for you to pass your actual test, Information Technology is not just about what applications you can use; it is about the systems you can support.

NEW QUESTION: 1What is the purpose of the RMAN recovery catalog? (Choose all that apply.)
A. It provides the ability to store backup records for more than a year.**B.** It must be used because all RMAN-related backup and recovery metadata information is contained in it.**C.** It provides a means of storing all RMAN backup sets physically in an Oracle database server.**D.** It provides the ability to store RMAN scripts for global use by any database that has access to the repository.**E.** It provides a convenient, optional, repository of backup- and recovery-related metadata.**Answer: A,D,E**
Explanation:A recovery catalog is a database schema used by RMAN to store metadata about one or more Oracle databases. Typically, you store the catalog in a dedicated database. A recovery catalog provides the following benefits:Some RMAN features function only when you use a recovery catalog. For example, you can store RMAN scripts in a recovery catalog. The chief advantage of a stored script is that it is available to any RMAN client that can connect to the target database and recovery catalog. Command files are only available if the RMAN client has access to the file system on which they are stored. A recovery catalog is required when you use RMAN in a Data Guard environment. By storing backup metadata for all primary and standby databases, the catalog enables you to offload backup tasks to one standby database while enabling you to restore backups on other databases in the environment.

NEW QUESTION: 2Your network contains an Active Directory forest. The forest contains two domains named contoso.com and fabrikam.com. All of the DNS servers in both of the domains run Windows Server 2012. The network contains two servers named Server1 and Server2. Server1 hosts an Active Directory-integrated zone for contoso.com. Server2 hosts an Active Directory-integrated zone for fabrikam.com. Server1 and Server2 connect to each other by using a WAN link. Client computers that connect to Server1 for name resolution cannot resolve

names in fabrikam.com. You need to configure Server1 to support the resolution of names in fabrikam.com. The solution must ensure that users in contoso.com can resolve names in fabrikam.com if the WAN link fails. What should you do on Server1? **A.** Create a secondary zone. **B.** Add a forwarder. **C.** Create a stub zone. **D.** Create a conditional forwarder. **Answer: A**
Explanation: C, When a zone that this DNS server hosts is a secondary zone, this DNS server is a secondary source for information about this zone. The zone at this server must be obtained from another remote DNS server computer that also hosts the zone. D, When a zone that this DNS server hosts is a stub zone, this DNS server is a source only for information about the authoritative name servers for this zone. The zone at this server must be obtained from another DNS server that hosts the zone. <http://technet.microsoft.com/en-us/library/cc771898.aspx>

NEW QUESTION: 3 What is the purpose of account determination in the accrual engine? There are 2 correct answers to this question. Response: **A.** To determine debit and credit accounts. **B.** To determine the correct posting period. **C.** To determine the document type. **D.** To determine the CO object. **Answer: A, C**
