NEW QUESTION: 1A. Option AB. Option EC. Option CD. Option DE. Option B **Answer: C,D,E**
Explanation: D: With filtering, you can control which objects should appear in Azure AD from your on-premises directory. For example, you run a pilot for Azure or Office 365 and you only want a subset of users in Azure AD. C: Attribute-based filtering: This option allows you to filter objects based on attribute values on the objects. You can also have different filters for different object types. B: After you have made your configuration changes, these must be applied to the objects already present in the system. It could also be that objects not currently in the sync engine should be processed and the sync engine needs to read the source system again to verify its content. If you changed configuration using attribute filtering, then you need to do Full synchronization. References:
