NEW QUESTION: 1Your company has two main offices and 10 branch offices. Each office is configured as a separate Active Directory site. The main offices sites are named Site1 and Site2. Each office connects to Site1 and Site2 by using a WAN link. Each site contains a domain controller that runs Windows Server 2008. You are redesigning the Active Directory infrastructure. You plan to implement domain controllers that run Windows Server 2012 and decommission all of the domain controllers that run Windows Server 2008. You need to recommend a placement plan for the Windows Server 2012 domain controllers to meet the following requirements: - Ensure that users can log on to the domain if a domain controller or a WAN link fails. - Minimize the number of domain controllers implemented. What should you include in the recommendation? (Each correct answer presents part of the solution. Choose all that apply.)
A. Read-only domain controllers (RODCs) in the branch office sites
B. Writable domain controllers in the branch office sites
C. A writable domain controller in Site2
D. A writable domain controller in Site1
Answer: A,C,D

NEW QUESTION: 2Given the session shown below: Which statement is true?
A. The session indicates that destination NAT with no port translation is taking place.
B. The session indicates that source NAT is taking place.
C. The session indicates that no NAT is taking place.
D. The session indicates that destination NAT with port translation is taking place.
Answer: B
Explanation: The output of the command shows that the TCP packet with src ip 10.1.0.13 and src tcp port 52939 and dst ip 207.17.137.229 and dst port 80 is entering interface ge-0/0/5.0 and the reverse connection is created for the same session: src ip 172.19.101.42 and src tcp port 2132 and dst ip 207.17.137.229 and dst tcp port 80. So the source ip 10.1.0.13 is translated to 172.19.101.42. NEW QUESTION: 3Classic Migration is: Please choose the correct answer. Response:
A. Only alternative
B. Reasonable alternative
C. General recommendation
D. Possible exception
Answer: A

NEW QUESTION: 4You plan to use a Hyper-V host server to host virtual desktops for external customers. You have the following requirements: Individual virtual machines (VMs) must be isolated from one another. VMs must have access to the Internet. IP addresses should be used in the most efficient manner possible. The configuration must minimize administrative effort and management complexity. You need to configure the virtual environment. What should you do?
A. Configure virtual networking with network isolation. Create a unique VM network for each VM.
B. Deploy VMs to the same VM network. Enable DHCP Guard and Router Guard network extensions.
C. Configure a port virtual local area network (PVLAN). Connect all new VMs to the PVLAN.
D. Configure a virtual network with no isolation. Deploy VMs to the same VM network.

Configure Windows firewall on each VM to prevent the VM from communicating with other VMs on the same VM network.**Answer: C**Explanation:Explanation/Reference:Explanation: PVLAN can be used to create an environment where VMs may only interact with the Internet and not have visibility into other VMs' network traffic. To accomplish this put all VMs (actually their Hyper-V switch ports) into the same PVLAN in isolated mode. Therefore, using only two VLAN IDs, primary and secondary, all VMs are isolated from each other.Ref: http://technet.microsoft.com/en-us/library/jj679878.aspx#bkmk_pvlan
